Business Spotlight August 2010 Issue 071

Sexton goes Bigger and Better with Seamless Domed Aerosols

For those in the aerosols filling market who think bigger is better then ITW Sexton is now able to produce seamless domed 211/713 and 300/709 aerosol cans. And as with all can sizes, ITW Sexton has also perfected the base pressure relief systems that meet regulatory standards.

No doubt Debbie Terry, who manages ITW's print and graphics department could pass on many ideas to clients on the potential of the larger domed seamless cans. Unlike most companies, ITW Sexton looks for ways to keep client initial start-up cost down by providing low cost artwork development for customized product needs.

ITW Sexton can help stagger their costings for large volumes by running warehousing of part consignments, with customers only being billed for consignments when delivered. Since 1880, Sexton Can Company, now ITW Sexton, has pioneered the design and manufacture of deep drawn metal containers for a variety of markets and applications. With a strong commitment to excellence and customer service, they have emerged as a leading provider of premium drawn components to the electronics, filters and aerosol industries.

Heading up ITW Sexton as general manager, Yuriy Wowczuk, cut his teeth with McKinsey, serving clients on lean manufacturing, reliability and product development. His experience in the can industry includes a successful tenure with Impress USA as a plant manager, where his team implemented lean manufacturing techniques to increase throughput and reduce scrap and spoilage. It is these sort of skills that ensure ITW Sexton are competitive in their field. ITW Sexton's core commercial team consists of: Doug Baker (Sales Manager), Debbie Terry (Graphics Manager), Terry Widner (Customer Service Manager), Shane Wiggins (Print Department Manager), and Rick Henry (Customer Technical Services). Doug Baker covers the Americas and Yuriy Wowczuk the rest of the world.

ITW Sexton services customers worldwide from two manufacturing plants located in Martinsburg, West Virginia and Decatur, Alabama.
